MFG Galileo Composites Expands Capacity, Relocates to Southern Alabama

- domestic and international sales growth drives composite radome manufacturer to increase factory capacity -

Opp, AL (October 20, 2009) --- MFG Galileo Composites, a leading specialist in the design and manufacturing of composite radomes and reflectors, announced that manufacturing operations for the company have been relocated from Sparks, NV to Opp, Alabama. The new built-to-spec facility adds manufacturing capacity and processing capabilities to accommodate increased demand, as well as improving accessibility to a significant percentage of their customer base. The company will maintain a satellite office in Reno, NV where key engineering and administrative team members will continue to operate from.

The new location in Southeast USA is accessible via numerous regional hubs, including Atlanta, Memphis, New Orleans, Birmingham and Pensacola. Opp is also home to sister company MFG Alabama, a manufacturer of large molded composite parts for renewable energy and other applications.

Clint Lackey, general manager of MFG Galileo explains, "This new facility is world class in terms of dedicated manufacturing floor space and state-of-the-art processing capabilities for composite radomes, reflectors, shelters and related products. We anticipate continued domestic and international sales growth in 2009 and 2010, and expect to quickly absorb the expanded capacity".

MFG Galileo ground-based and shipboard radomes support L-band through Ka-band applications. The company has an installed base of more than 500 radomes around the world and is part of Molded Fiber Glass Companies (Ashtabula, OH).

The new plant is located at 18361 Galileo Drive, Opp AL 36467.

MFG Galileo will be exhibiting at ITC 2009 in Las Vegas, NV, October 26-29, booth #1101.

About MFG Galileo Composites

MFG Galileo Composites is an ISO 9001 certified radome engineering and manufacturing company with an unmatched composites engineering capability. As the only specialist in the design and manufacturing of composite radomes that is part of a larger corporation devoted to advanced composites manufacturing and supported by a dedicated materials research entity, MFG Galileo provides the most highly researched, engineered and tested products on the market today.

With a track record of success partnering with the most respected organizations in the industry, MFG Galileo delivers technology leadership, a commitment to innovation and superior customer service. For more information, visit www.mfggalileo.com.

About Molded Fiber Glass Companies

Molded Fiber Glass is a leading composites manufacturer with operations in the US and Mexico, and a rich heritage of pioneering the use of composites in many different industries including automobiles, trucks, wind energy, water treatment products, protective safety equipment, military, communications and construction.

Founded in 1948, MFG is a recognized leader in the composites industry, producing parts and assemblies for Fortune 500 companies, including General Electric, Paccar, Freightliner, Dell Computer and General Motors. The privately owned corporation is headquartered in Ashtabula, OH with manufacturing facilities in 10 states. Web site: <http://www.moldedfiberglass.com>.
